

Quest® Recovery Suite

for Active Directory and Exchange

Quickly and Accurately Recover Your Critical Active Directory and Exchange Data

Active Directory (AD) and Exchange are two of the most critical systems in your Windows infrastructure. Exchange is the foundation of your internal communication and key business applications, while Active Directory manages essential information about employees and resources – including Exchange files. To sustain efficient business operations, these two systems must be running smoothly.

The Importance of Protecting Your Active Directory and Exchange data

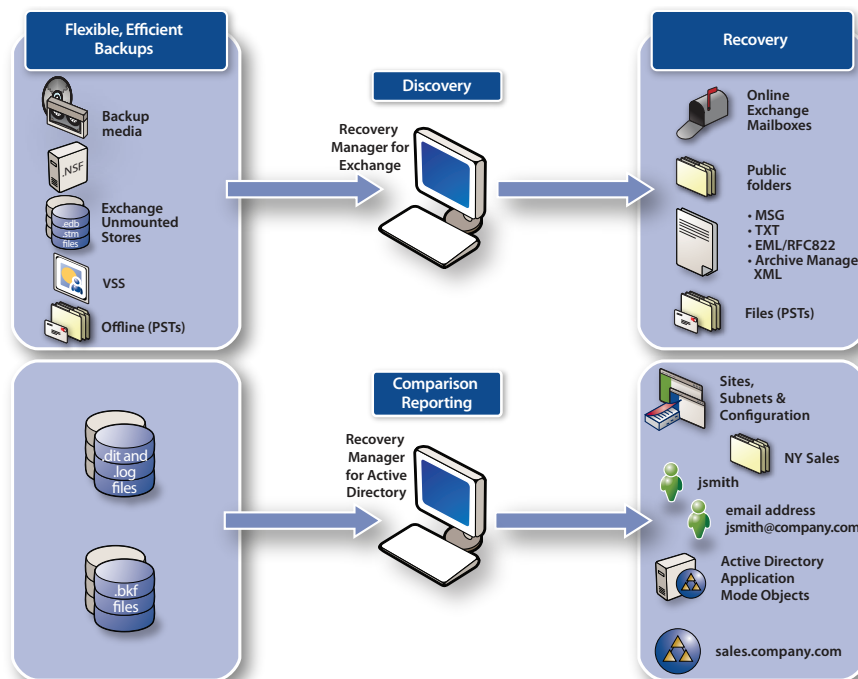

Human error, as well as hardware or software failures, can easily corrupt AD, system configurations or Group Policy data. In addition, AD objects can be modified or deleted by mistake and faulty scripts can overwrite attributes. The result of any of these problems is unplanned system downtime and hours – or even days – of lost user productivity.

Electronic discovery (e-discovery) inquiries, either to accommodate internal investigations or to comply with regulatory inquiries, require access to e-mail. IT operation teams typically maintain Exchange recovery infrastructures so they can perform discovery and recovery when the need arises. These tasks can take hours, days or even weeks to complete, depending on the scale of the request. At the same time, end users now demand that IT provide message-level recovery services that have previously been available only to C-level executives and key business stakeholders.

Restore Any Lost Data Quickly and Accurately

Quest® Recovery Manager for Active Directory empowers you to recover from inadvertent deletions or changes to your AD data in minutes, not hours. With its remote, online, granular restore capability, you can recover entire sections of the directory, selected objects and individual attributes without taking AD offline.

Quest® Recovery Manager for Exchange allows you to restore individual, message-level items – including e-mails, appointments, tasks, contacts, and attachments – from regular Exchange backups and un-mounted .edb information stores and Notes .NSF files. You can accomplish this without setting up a dedicated Exchange recovery server.

Why Quest for Active Directory?

Our Solutions Help You:

- Migrate with ZeroIMPACT™
- Keep AD available
- Manage AD efficiently
- Audit and report with ease
- Extend AD's reach across platforms

Why Quest for Exchange?

Our Solutions Help You:

- Migrate with ZeroIMPACT™
- Manage storage
- Ensure Exchange availability
- Improve performance

Recovery Manager for Active Directory

offers fast, online, granular recovery of Active Directory, System State and Group Policy data.

"Quest Software is the only company that offers a product like Recovery Manager for Active Directory. Recovery Manager takes an otherwise cryptic and time-consuming task and makes it very simple and rapid. The Sales and technical support teams have been great. They are very knowledgeable, and completely answered all of our questions."

—Joe Davis
Senior Architect
Tyco Healthcare

Recovery Manager for Exchange

rapidly and efficiently discovers and recovers business-critical Exchange data to aid with electronic investigations and loss of user e-mail.

"When you manage an Exchange organization, you receive many requests to restore a message or folder. Users don't realize how time-consuming and labor-intensive it is to track down tapes, and locate and restore specific information. Recovery Manager for Exchange takes the fear out of recovery, making the task much easier and painless; it definitely fits our needs and saves us a huge amount of time."

—Barbara Jaeckel
