

SECURITY EXPLORER™ ***FOR EXCHANGE***

Key Benefits

• **Increase Productivity**

Exchange permissions are in two places: Exchange and Active Directory. No other tool gives you the comprehensive ability to manage both of those from one interface apart from Security Explorer for Exchange.

• **Meet Compliance Objectives**

Achieve compliance and enforce access controls across your Exchange environment.

• **Improve Security**

Manage object security on mailboxes, public folders, Exchange servers, storage groups, and more.

Key Features

• **Manage Permissions**

Native Exchange management tools are very cumbersome. Security Explorer eliminates the need to navigate multiple menus to manage permissions on any object.

• **Report on Security**

Easily report on mailbox and public folder permissions by exporting to Excel spreadsheet.

• **Backup Permissions**

Granularly backup and restore permissions on all Exchange objects, allowing for easier restoration of permissions to an individual object or multiple objects at once.

• **Clone Permissions**

Easily transfer permissions from one account to another using Security Explorer's clone functionality.

ScriptLogic's Security Explorer for Exchange is a powerful, graphical solution for real-time management of access controls and security in Exchange. This broad, real-time solution offers administrators the ability to manage, search, clone, backup, and recover permissions and security in Exchange. This solution provides consolidated management of mailbox and Active Directory permissions from one, simple to use interface.

Protect Your Environment

Exchange is one of the most widely used, mission critical applications used in business today. Managing the security of Exchange servers has also become "missioncritical" due to the nature of the content often sent via e-mail. Financial records, human resource data, customer profiles and more are just a few of the content types that could get in the wrong hands if the appropriate security controls are not in place.

Securing Exchange requires extensive management capabilities. With the growing number of regulatory compliance mandates, more than ever before, organizations must be able to prove that they have implemented security measures by managing user access, delegating permissions, and automating the overall management of their Exchange environment.

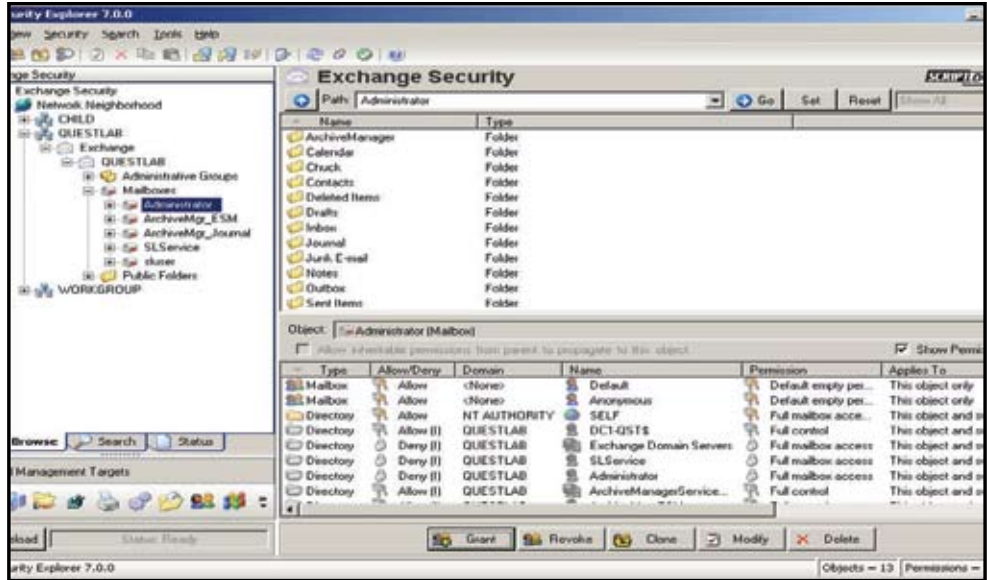

Security Explorer for Exchange allows administrators to manage, search, clone, backup, and recover permissions and security across the Exchange environment. This advanced management capability provides organization's the solution they need to meet external compliance regulations, avoid using native, cumbersome tools, and manage Exchange permissions found in both Active Directory and Exchange.

Powerful, Robust Yet Simple Permission Management

- **Consolidate** the backup and recovery of all Exchange objects
- **Search** for permissions on a very granular level
- **Manage** permissions on mailbox folders such as Calendars, Contacts and Inbox folders without having to access the Outlook client
- **Report** on mailbox and public folder permissions
- **Clone** permissions from one account to another to avoid duplication of effort and potential errors
- **Demonstrate** compliance with the ability to enforce security and manage access controls
- **Administer** Exchange and Active

System Requirements

- Security Explorer for Exchange requires Exchange Server 2000 / 2003 / 2007

Native Exchange management tools are very cumbersome. Security Explorer eliminates the need to navigate multiple menus to manage permissions on any object.

About Quest Software, Inc.

Quest Software, Inc., a leading enterprise systems management vendor, delivers innovative products that help organizations get more performance and productivity from their applications, databases, Windows infrastructure and virtual environments. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 100,000 customers worldwide meet higher expectations for enterprise IT. Quest provides customers with client management as well as server and desktop virtualization solutions through its subsidiaries, ScriptLogic and Vizioncore. Quest Software can be found in offices around the globe and at www.quest.com.
