

# Quest<sup>®</sup> Migrator for Sametime

## Migrate with Ease from IBM Lotus Sametime to Microsoft Office Communications Server 2007

Many IBM Lotus Notes customers use IBM Lotus Sametime for unified communications (UC) and collaboration, including instant messaging. When these organizations transition from Lotus Notes to the Microsoft platform, they often need to also migrate from Lotus Sametime to Microsoft Office Communications Server (OCS) 2007 for UC and collaboration, in order to ensure a more direct and seamless transition with no loss in functionality or productivity. However, there are currently no native migration paths from Sametime to OCS.

Quest Migrator for Sametime simplifies migration from Lotus Sametime to OCS by providing a detailed pre-migration assessment, centralized project management, and automation of tasks. User contacts and settings are migrated with complete accuracy, ensuring that end users experience no impact from the process.

**Complete Control:** Migrator for Sametime keeps you in complete control of your migration with a centralized Microsoft Management Console (MMC) snap-in. The MMC console allows administrators to work with a familiar interface and provides a broad project view showing all migration steps, the configuration settings per user, and user migration status.

**PowerShell Enabled:** Migrator for Sametime is now PowerShell enabled. Use the PowerShell command line or Quest PowerGUI™, a free graphical user interface and script editor, to perform tasks. Migrator for Sametime also includes a PowerPack: pre-defined PowerShell scripts for creating and running migration jobs quickly and easily.

## BENEFITS

- Provides a detailed pre-migration assessment to detect errors or failures that might occur during an actual migration
- Offers administrators complete control of the migration from a centralized MMC snap-in
- Migrates user contacts and settings with complete accuracy
- Provides real-time migration reporting with the status of each user's migration
- Automates and schedules manual administrative tasks, saving time and preventing errors
- Provides end users with a seamless, low-impact transition
- Saves time and productivity by eliminating the need for end users to rebuild their contact lists

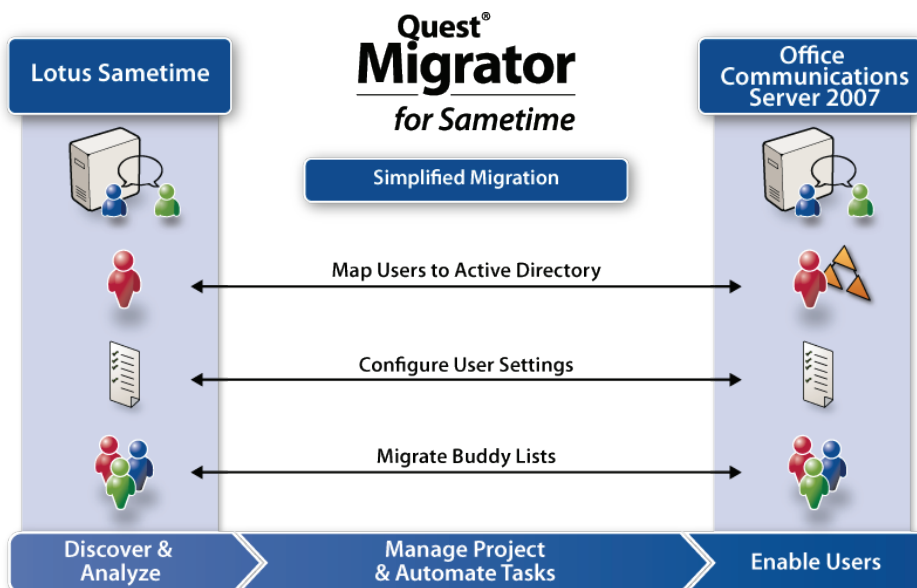

*«Microsoft has been very supportive in the development of the Sametime-to-Office Communications Server migration product, as it will provide customers with a solution that minimizes the impact from the migration and maintains user productivity as they move to the next generation communications solution.»*

— Eric Swift, senior director,  
Unified Communications Group,  
Microsoft.

**Pre-Migration Discovery:** To help with migration planning, Migrator for Sametime identifies all existing users as well as their contacts and properties in Sametime. Administrators get reports of users with contacts above and below the contact limit and those with nested groups, so they know which ones may present problems during the OCS migration. This discovery can be scheduled to run automatically or on-demand.

**Web-Based Reporting:** From the migration console, administrators can view the project status at a glance and provide management with up-to-the-minute reports. Administrators can drill down within the migration status report to access detailed information on the status of each project, even down to the individual user. Reports can be e-mailed or exported to XML, html, or other data formats.

**QuickMap:** Migrator for Sametime maps Sametime users to Active Directory (AD) accounts by matching a user attribute from the Domino server with one in AD. If you previously used Quest Notes Migrator for Exchange, the data collected during that migration can be reused to map Sametime users to AD. The tool's point-and-click process saves valuable administrator time.

**FlexEnable:** Migrator for Sametime enables you to control when users are enabled for functionality in Office Communication Server 2007. During this process SIP addresses are automatically generated for users. With Migrator for Sametime, you can use a small group of accounts as a pilot to help ensure a successful migration.

**High-Fidelity Migration:** Migrator for Sametime accurately replicates all user settings and contact lists, including external contacts, group names, and the hierarchy of nested groups, in Office Communications Server 2007, ensuring a seamless transition for end users.

**Migration Assessment:** Prior to the migration, administrators can test migration settings without making changes to production servers. This assessment alerts them to any errors or failures that might occur during an actual migration.

**Anytime Scheduling:** Administrators can schedule migration tasks to run when they cause minimal impact to end users.

**Simplified Administration:** Migrator for Sametime automates manual administrative tasks, including user mapping and group creation, and sends notifications indicating their success or failure. This saves time and prevents errors.

**Minimal Productivity Loss:** End users experience no impact from the migration and no loss in productivity. They do not have to rebuild or reorganize their contact lists, saving an average of 30 minutes per user. A company with 10,000 users could save 5,000 hours of productive time by using Migrator for Sametime.

## About Quest Software, Inc.

Now more than ever, organizations need to work smart and improve efficiency. Quest Software creates and supports smart systems management products—helping our customers solve everyday IT challenges faster and easier. Visit [www.quest.com](http://www.quest.com) for more information.

## SYSTEM REQUIREMENTS

### Operating System:

- Windows XP Professional SP 3 or later (32-bit or 64-bit)
- Windows Server 2003 SP 2 or later (32-bit or 64-bit)
- Windows Server 2003 R2 SP 2 or later (32-bit or 64-bit)
- Windows Vista SP 2 or later (32-bit or 64-bit)
- Windows Server 2008 (32-bit or 64-bit)
- Windows Server 2008 R2 (64-bit only)

### Source:

- IBM Lotus Domino 6.5, 7.x, or 8.0
- IBM Lotus Sametime 6.5, 7.5, or 8.0
- IBM Lotus Notes 6.5, 7.0, or 8.0

### Target:

- Microsoft Office Communications Server 2007 or Office Communications Server 2007 R2

### Database:

- SQL Server 2000 SP 4 or later
- SQL Server 2005 SP 2 or later
- SQL Server 2005 Express SP 2 or later
- SQL Server 2008 SP 1 or later
- SQL Server 2008 Express Edition SP 1 or later

### Platform:

- x86 or x64, running at minimum speed of 2 GHz

### Memory:

- 2 GB

### Hard Disk Space:

- 300 MB on system drive for application. To run a large number of tasks, more disk space may be required.

### Additional Software:

- Microsoft XML Core Services 6.0
- Microsoft .NET Framework 3.5 or later
- Microsoft Management Console 3.0
- Windows PowerShell 1.0 or later
- Microsoft Internet Explorer 6.0 or later (Web Reports only)
- Microsoft IIS 6.0 or later (Web Reports only)
