## Contacting Quest Support

Quest Support is available to customers who have a trial version of a Quest product or who have purchased a commercial version and have a valid maintenance contract. Quest Support provides around the clock coverage with SupportLink, our web self-service. Visit SupportLink at <http://support.quest.com>

From SupportLink, you can do the following:

- Quickly find thousands of solutions (Knowledgebase articles/documents).
- Download patches and upgrades.
- Seek help from a Support engineer.
- Log and update your case, and check its status.

View the ***Global Support Guide*** for a detailed explanation of support programs, online services, contact information, and policy and procedures. The guide is available at: [http://support.quest.com/pdfs/Global Support Guide.pdf](http://support.quest.com/pdfs/Global%20Support%20Guide.pdf)

# What's New in Quest Migration Manager for SharePoint 2.1

## More Robust, Scalable SharePoint 2007 Migration

Unlike native content migration tools that rely on bulk export/import operations, Migration Manager 2.1 breaks site migration into multiple migration tasks internally. Each task is handling an individual site or list. Should an error occur, only the affected task fails and migration of other sites and lists proceeds. With native tools, a slightest error during export or import causes the entire migration to fail.

Migration Manager makes a few retries on the failed task automatically before giving up and reporting an error. You can review the error message, fix the issue and retry that particular task individually, without restarting the whole migration job or cleaning up after the failed migration.

Source:  Limit:  Filter

	Source	Target	Status	State
<input checked="" type="checkbox"/>	<a href="http://moss-srv/Docs/Documents">http://moss-srv/Docs/Documents</a>	<a href="http://moss-srv/sites/projects/Documents">http://moss-srv/sites/projects/Documents</a>	Completed	<a href="#">View...</a>

Restart Selected

## Granular SharePoint 2007 Re-Sync

With Migration Manager 2.1, you can perform full resynchronization of SharePoint 2007 to 2007 migration jobs. Job resynchronization will apply new and updated content, modified settings and security permissions to the target sites and lists. You can re-sync either the whole migration job at once or any specific pair of sites or lists within the scope of the job.

## Migration Exclusions

When configuring a site migration job, you have an option to exclude specific child sites, lists and libraries so that only the content you need is carried over to the new location. This saves bandwidth for unwanted data transfers and/or relieves you from extra clean-up work.

**Configure Exclusions**

Uncheck sites and lists to be excluded during migration.

<input checked="" type="checkbox"/>	http://LAB04-WYOMING/harry potter/lily		

OK Cancel

## Batched List Migration

You can migrate multiple SharePoint lists and libraries with a single migration job. A job can include lists from one or more sites. This minimizes the number of migration jobs to configure and monitor when consolidating content across multiple sites.

## More State-Based Job Views

Migration job tracking has been significantly improved in this version. New views have been added to provide a better insight into the migration process.

## Enhanced Migration Job Properties

When you switch to the migration job properties page, you will immediately see a number of enhancements implemented in Migration Manager 2.1:

- **Migration pairs** – get insight into which sites and lists your migration job is comprised of, what your source sites and lists are mapped to in the target; and see the completion status of or restart any individual migration task (for SharePoint 2007 to 2007 migrations only).
- **Last modified** - Migration Manager now provides the time metric for SharePoint 2003 to 2007 migration jobs that shows when the most recent modification (edit, add, delete) to the source content (list items, documents, lists, libraries and sites) was detected in the scope of the migration job. This metric helps you understand when it is safe to pull the plug on the migrated sites.
- **Web part migration view** – The web part migration tool now provides a more detailed view of web part migration jobs. For each job, it displays a list of SharePoint 2003 pages and document libraries to be processed as well as their target counterparts in SharePoint 2007.

## Info Portal Bundled

Site Administrator's Information Portal comes with Migration Manager 2.1 free of charge! This web-based dashboard portal that aggregates data across all SharePoint farms and presents it on the Enterprise level, allowing to drill down to specific sites and sub-sites. This great tool complements the built-in reports in Migration Manager and can be used for pre-migration and post-migration analysis of your SharePoint environment.
