

Quest® Notes Migrator for SharePoint

Discovery Edition

Free Discovery and Analysis of Your Notes Applications

Quest's Notes Migrator for SharePoint - Discovery Edition offers free analysis of your Notes application environment so you can estimate the scope of your migration to SharePoint and manage the process more effectively. This reduces your risk of migration failure and keeps you in control.

The Discovery Edition is free when you download a trial copy of Notes Migrator for SharePoint at www.quest.com/notesanalysis. The trial copy provides full functionality of the Discovery Edition, as well as 30 days of support.

Key Capabilities

- Find Notes databases across all servers in all locations
- Classify applications according to technical or business attributes
- Analyze application usage to identify unused applications
- Assess design complexity and deviations from standard templates
- Determine data complexity and identify content migration needs
- Detect which forms are being used in each application
- Discover mail-in databases
- Design custom views, multi-level reports, and charts
- Export data for use with other tools

Management console for discovery and analysis of Notes applications.

The Notes Migrator for SharePoint - Discovery Edition allows you to:

- **Identify Notes databases** across all servers in all locations.
- **Classify applications** according to technical or business attributes using a rules-based engine. This will help you make decisions about what data to migrate and where it should go in SharePoint.
- **Scan selected databases** to determine which have been used recently and which have not. You will get an in-depth understanding of your current Notes usage to help you build a thorough migration plan and reduce the costs of your migration project.

System Requirements

Operating Systems:

Notes Data Extraction*:

- Windows XP, Windows 2003 or Windows Vista
- Lotus Notes 6.0 client or higher (may connect to remote Notes 3.0 or higher servers on any platform)
- .NET Framework 3.0

SharePoint Data Load*:

- Windows 2003
- Windows SharePoint Services 3.0 or Office SharePoint Server 2007
- .NET Framework 3.0
- Administrator access on the SharePoint server, database and site collection

* Notes Data Extraction and SharePoint Data Load may occur simultaneously in a single process or in different processes on different machines.

- **Analyze your application databases** to assess design complexity. Automatically compare databases with their original templates to determine which design elements have been added or modified. Discover which forms are actually being used as content types.
- **Evaluate data complexity** and identify content migration needs. Determine which applications make use of complex data features such as embedded objects, document links, embedded forms, digital signatures and document encryption.
- **Design custom views, multi-level reports, and charts.** This will allow you to organize, view and present the information you gather in a variety of ways.
- **Gather results** using an open data repository. You can also export the information to Excel, PDF or XML formats for manipulation in other tools.

For organizations wishing to upgrade to Notes Migrator for SharePoint – Standard or Premier Edition, the data you collect in the analysis phase becomes “home base” for performing actual migrations to SharePoint lists, libraries, pages or even InfoPath.
